

## **1. Public Executive Summary**

The 2020 3D Media project work package 6.1 addresses the distribution of digital content by satellite. Deliverable 6.4 shows the progress to date in the code generation to allow: cinema ordering, to automatically identify content, schedule its distribution, perform the transmission of files, and obtain confirmation of successful, or otherwise, of their delivery.

The initial code uses the metadata contained within the DCI /DCP information and efficient, successful transfers have been demonstrated.

Work remains relating to the broadcast of live content, alternative content and to home environments.
